Trans. of Archiv für das Eisenhüttenwesen (West
Germany) 1960, v. 31, no. 2, p. 87-90.

DESCRIPTORS: *Open hearth furnaces, Roofs, Surface
temperatures, Determination, *Infrared photography.

The manner in which the method of infrared photographs
can be carefully applied under operating conditions is
described by means of the example of the determination
of the temperature field in the roofs of Siemens-Martin
furnaces. It permits the determination even of extensive
temperature fields by a single operation and allows de-
ductions with respect to the wear of furnaces. (Author)

*Flotation (Separation), Material separation, Air, Con-
sumption, Fatty acids.

Talloil can be obtained directly from black liquor when the black liquor from sulfate-pulp manufacture is subjected to flotation by air saturated with vapors of mineral acids. Various substances acidified during the process are not surface-active, and are not extractable from the black liquor by this method. The degree of flotation considerably depends on the temperature of the black liquor, and at small concentrations of talloil in the (Chemistry--Physical, TT, v. 9, no. 11) (over)
